J. Cell Biol. 129:179-188 (1995)
-I- FUNCTION: ACTIN-BINDING PROTEIN THAT MAY BE INVOLVED IN THE CONTROL OF CELL MOTILITY AND CHEMOTAXIS.
-I- SUBCELLULAR LOCATION: CYTOPLASMIC; RAPIDLY ASSEMBLES AT THE LEADING EDGE OF CELLS IN RESPONSE TO CHEMOATTRACTANT.
-I- SIMILARITY: CONTAINS A DOMAIN FOUND IN BAND 4.1, EZRIN, MOESIN,
                                                                                                                                        694

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      filament subunits."
                                                                                                                                                             SUBUNIT: HETEROTETRAMER OF TWO TYPE I AND TWO TYPE II KERAY.
KERATIN 1 IS GENERALLY ASSOCIATED WITH KERATIN 10.
TISSUE SPECIFICITY: THE SOURCE OF THIS PROTEIN IS NEONATAL
FORESKIN. THE 67-KOA TYPE II KERATINS ARE EXPRESSED IN TERN
DIFFERENTIATING EPIDERMIS.
POLYMORPHISM: THERE ARE TWO SIZE VARIANTS OF KRT1, TERMED
                                                                     1B WITH ALLELIC FREQUENCIES OF 0.61 AND 0.39. 1B LACKS 7 LACKS 7 RESIDUES COMPARED TO 1A.
7 RESIDUES COMPARED TO 1A.
DISEASE: DEFECTS IN KTT10 AND KRT1 ARE THE CAUSE OF EPIDERMOLYTIC HYPERKERATOSIS (EHK) (ALSO KNOWN AS BULLOUS CONGENITAL ICHTHYOSIFORM ERYTHRODERMA (BIE)); A HEREDITARY SKIN DISORDER CHARACTERIZED BY BLISTERING AND A MARKED THICKENING OF THE STRATU
         MISCELLANEOUS: THERE ARE TWO TYPES OF CYTOSKELETAL MICROFIBRILLAR KERATIN: I (ACIDIC; 40-55 KDA) [K9 (NEUTRAL TO BASIC; 56-70 KDA) [K1 TO K8]
                                                          CORNEUM.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   70:821-828(1992).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Natl. "A novel threonine-to-proline mutation at the end of 2B rod domain
the keratin 2e chain in ichthyosis bullosa of Siemens.";

J. Invest. Dermatol. 109:116-118(1997).

-i- FUNCTION: PROBABLY CONTRIBUTES TO TERMINAL CORNIFICATION.

-i- SUBUNIT: HETEROTETRANER OF TWO TYPE I AND TWO TYPE II KERATINS.

-i- TISSUE SPECIFICITY: IN THE SUPRABSAL LAYERS OF EPIDERMAL
TISSUES FROM MOST BODY SITES, EXCEPT IN FORESKIN, IN SOUAMOUS
DETAPLASTAS AND CARCINOMAS.
                                                                                                                                                                                                                                                                                                                                                                                                                     Rothnagel J.A., Traupe H., Wojcik S., Huber M., Pittelkow M.R., Saeki H., Ishibashi Y., Roop D.!                                                                                                                                                                                                                                                                                          PROGRAM OF THE FORMATION OF THESE TISSUE.

-!- SUBUNIT: HETEROTETRAMER OF TWO TYPE I AND TWO TYPE II KERATINS.
-!- TISSUE SPECIFICITY: EXPRESSED IN THE TERMINALLY DIFFERENTIATED EPIDERMIS OF PALMS AND SOLES.
-!- DISEASE: DEFECTS IN KRT9 ARE A CAUSE OF EPIDERMOLYTIC PALMOPLANTAR KERATODERMA (EPPK), AN AUTOSOMAL DOMINANT DISEASE CHARACTERIZED BY DIFFUSE THICKENING OF THE EPIDERMIS ON THE ENVIRE SURFACE OF PALMS AND SOLES SHARPLY BORDERED WITH EXTHEMATOUS MARGINS.
-!- MISCELLANBOUS: THERE ARE TWO TYPES OF CYTOSKELETAL AND MICROFIBRILLAR KERATIN: I (ACIDIC; 40-55 KDA) [K9 TO K20] AND II (NEUTRAL TO BASIC; 56-70 KDA) [K1 TO KB]
                                                                        This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation the European Bioinformatics Institute. There are no restrictions on its
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            J. Invest. Dermatol. 104:430-433(1995).
-i- FUNCTION: MAY SERVE AN IMPORTANT SPECIAL FUNCTION EITHER IN MATURE PALMAR AND PLANTAR SKIN TISSUE OR IN THE MORPHOGENIC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 MEDLINE=94214498; PubMed=7512862;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Meinke A., Gilkes N.R., Kilburn D.G., Miller R.C. Jr., Warren R.A.J.;

"Multiple domains in endoglucanase B (CenB) from Cellulomonas fimi:
functions and relatedness to domains in other polypeptides.";

J. Bacteriol. 173:7126-7135(1991).

-!- FUNCTION: THE BIOLOGICAL CONVERSION OF CELLUIOSE TO GLUCOSE
GENERALLY ROUIRES THREE TYPES OF HYDROLYTIC ENZYMES:

(1) ENDOGLUCANASES WHICH CUT INTERNAL BETA-1,4-GLUCOSIDIC BONDS;
(2) ENCOELLOBIOHYDROLASES THAT CUT THE DISSACCHARIDE CELLOBIOSE
FROM THE NONREDUCING END OF THE CELLUDIOSE AND OTHER

(3) BETA-1,4-GLUCOSIDASES WHICH HYDROLYZE THE CELLUDIOSE AND OTHER
SHORT CELLO-OLIGOSACCHARIDES TO GLUCOSE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             MEDLINE=91100298; PubMed=1987122;
